PATENTAMENDMENT B (IN RESPONSE TO PAPER NO. 110504
(OFFICE ACTION DATED NOVEMBER 12, 2004))CLAIM AMENDMENTS

1. *(CURRENTLY AMENDED)* A method for utilizing an interface client in an interface roaming network, comprising:
 - (a) submitting information about an interface client along a first wireless communication path to a wireless link device in vicinity to proximity of the interface client;
 - (b) receiving content along a second wireless communication path from a remote source and conveying the content via the wireless link device to the interface client along the first wireless communication path; and
 - (c) displaying the content on a display of the interface client.
2. *(CURRENTLY AMENDED)* The method of claim 1, further comprising receiving a signal from the wireless link device when the wireless link device is in the vicinity proximity of the interface client prior to submitting the information about the interface client to the wireless link device.
3. *(CURRENTLY AMENDED)* The method of claim 2, wherein the signal from the wireless link device is transmitted from the wireless link device in response to a prior signal transmitted from the interface client.
4. *(CURRENTLY AMENDED)* The method of claim 2, wherein the signal from the wireless link device includes information identifying a user of the wireless link device.
5. *(ORIGINAL)* The method of claim 1, wherein the information about the interface client includes at least one of: information about the capabilities of the interface client, information about display capabilities of the interface client,

information about an input device of the interface client, and information about the location of the interface client.

6. *(CURRENTLY AMENDED)* The method of claim 1, wherein the ~~content is received from remote source~~ is an infrastructure server.

7. *(CANCELLED)*

8. *(ORIGINAL)* The method of claim 1, wherein the content is formatted based on the submitted information about the interface client.

9. *(CURRENTLY AMENDED)* A system for utilizing an interface client in an interface roaming network, comprising:

an interface client adapted for submitting information about the interface client along a first wireless communication path to a wireless link device in ~~vicinity~~ proximity of the interface client, the interface client having a display adapted for displaying content received by the interface client along the first wireless communication path; and

~~a the wireless link device~~, adapted for receiving along the first wireless communication path the interface client information, receiving the content along a second wireless communication path from a remote source and conveying the content to the interface client along the first wireless communication path.

10. *(CURRENTLY AMENDED)* The system of claim 9, wherein the interface client has a transceiver adapted for receiving a signal from the wireless ~~link device~~ when the wireless ~~link device~~ is in the ~~vicinity~~ proximity of the interface client prior to submitting the information about the interface client to the wireless

linkdevice.

11. *(CURRENTLY AMENDED)* The system of claim 10, wherein the signal from the wireless link-device is transmitted from the wireless link-device in response to a prior signal transmitted from the transceiver of the interface client.

12. *(CURRENTLY AMENDED)* The system of claim 10, wherein the signal from the wireless link-device includes information identifying a user of the wireless link-device.

13. *(ORIGINAL)* The system of claim 9, wherein the information about the interface client includes at least one of: information about the capabilities of the interface client, information about display capabilities of the interface client, information about an input device of the interface client, and information about the location of the interface client.

14. *(CURRENTLY AMENDED)* The system of claim 9, wherein the ~~content is received from remote source~~ is an infrastructure server.

15. *(CANCELLED)*

16. *(ORIGINAL)* The system of claim 9, wherein the content is formatted based on the submitted information about the interface client.

17. *(CURRENTLY AMENDED)* A computer program product for utilizing an interface client in an interface roaming network, comprising:

(a) computer code for submitting information about an interface client along a first wireless communication path to a wireless link-device in ~~vicinity~~

teproximity of the interface client;

(b) computer code for receiving along a second wireless communication path content from a remote source and conveying the content via the wireless link-device to the interface client along the first wireless communication path; and

(c) computer code for displaying the content on a display of the interface client.

18. (ORIGINAL) The computer program product of claim 17, wherein the information about the interface client includes at least one of: information about the capabilities of the interface client, information about display capabilities of the interface client, information about an input device of the interface client, and information about the location of the interface client.

19. (CURRENTLY AMENDED) The computer program product of claim 17, wherein the content is received from an infrastructure server via the wireless link-device.

20. (ORIGINAL) The computer program product of claim 17, wherein the content is formatted based on the submitted information about the interface client.
